Cognex® is the world's leading supplier of machine vision sensors, or computers that can "see".

Our machine vision sensors gauge, guide, inspect, count, and identify products on the fastest production lines.

Our proven technology, application expertise, and worldwide support mean customers can rely on us to deliver machine vision solutions that work every time - even under the most difficult factory floor conditions. In the industrial machine vision market, Cognex has supplied more vision products ... over 275,000 ... than any other company.

Customers rely on Cognex as a long-term partner, working alongside them to continually find new ways to improve the quality, productivity, and profitability of their manufacturing operations. Cognex is the machine vision leader that industry relies on!

WHEN: Every Second Wednesday of the Month
9:00 – 1:00 (lunch provided)

WHERE: AAP Automation
2901 S. Tejon St, Unit A.
Englewood, CO 80110

CLASS SIZE: 6 – 8

BRING: Laptop, Applications

AAP Automation invites you to attend a Technical Forum on Cognex In-Sight sensors. This half day seminar will include in-depth technical information on the Cognex Products and Software tools.

Agenda

| | |
|--------------------|---------------|
| Overview | 9:00 – 9:15 |
| Cognex Hardware | 9:15 – 10:00 |
| Cognex Software | 10:00 – 12:00 |
| Lunch/Applications | 12:00 – 1:00 |

New Software Speeds In-Sight Deployment

The class will include detailed training on the new In-Sight software which improves workflow, eases integration, and speeds deployment of vision sensors on the factory floor.

In-Sight Explorer 3.1 now features the familiar Microsoft Windows® XP look and feel, and supports the use of industry-standard OPC communication tags

Checker Sensor Eliminates Photoelectric Wiring Issues

Training will also include information on the Checker™ sensor. The Checker™ is the simple and affordable solution for verifying the presence of product and packaging features. Essentially a versatile "multi-sensor", a single Checker detects features that would require multiple photoelectric sensors, or may not be within the capability of photoelectrics.
